ARMSTRONG ZL-9001A

A computer-controlled system for assessing the load-bearing ability of corrugated cartons and packaging containers. Review carton dimensions, expected force and test method before selecting the setup.

Technical specifications

Parameter	Specification
Capacity	1000 kgf load cell (approximately 9.81 kN); operating limit confirmed in quotation
Compression space	800 x 800 x 800 mm
Control	Computer control with TM2101 software
Drive System	Servo motor with twin ball screws
Tests	Carton and packaging container compression
Power supply	Single-phase 220 V, 50 Hz; confirm machine nameplate
Test method	Agreed packaging compression method; confirm applicable standard and edition

Confirm your test configuration

- Carton length, width, height and expected compression load.
- Compression or holding requirement and required test duration.
- Applicable packaging test method, report format and site details.

The 1000 kgf figure is the documented load-cell rating, approximately 9.81 kN. Confirm the maximum permitted operating load and actual platen clearance before ordering.

Specifications are reference values for configuration review. Final capacity, fixtures, software functions and supplied accessories must be agreed in the quotation. Calibration scope and documentation are confirmed separately.
